

Otto Notes — Standard Operating Procedure

PLACEHOLDER DOCUMENT — v1.0 · Effective September 2026

1. Purpose and Scope

This Standard Operating Procedure defines the approved process for capturing, generating, reviewing and distributing clinical documentation using Otto Notes. It applies to all clinicians, nurses and administrative staff with an Otto Notes account.

2. Patient Consent

Verbal consent must be obtained and recorded before any consultation is transcribed. The consent prompt shown at the start of a session must be confirmed by the clinician. If a patient declines, use Dictate mode instead of Transcribe.

3. Capturing a Consultation

Confirm the correct microphone and speaker are selected before recording. Select the patient record, or create a new patient where none exists. Supporting documents may be attached for additional context.

4. Note Generation and Review

Select the appropriate template before generating. Every AI-generated note must be read in full, corrected where required, and marked as Reviewed by the responsible clinician before it is finalised. Otto Notes output is a draft and is never a substitute for clinical judgement.

5. Letters

Letters generated from a session follow the To be sent / Sent workflow. Once a letter is marked as sent it becomes read-only. Administrators may view all clinic letters; clinicians see only their own.

6. Data Protection

Patient identifiable information must not be shared outside the platform. Accounts are personal and must not be shared. Report any suspected data incident to your clinic administrator immediately.

7. Support and Escalation

First-line support is available through the Help Center within Otto Notes. Issues affecting patient safety must be escalated to the clinic lead on the same working day.

This is placeholder content for layout purposes only and does not represent approved clinic policy.
